FATTEN*

Bigger, Faster, Stronger

The digestive system of fish & prawn is rather simplistic. Shrimp & Fish are naturally deficient in digestive enzymes and are incapable to digest complex nutrient rich feeds. Shrimp Digestive organs in modern aquaculture are under tremendous strain and cave in to mild infections.

In intensive and semi-intensive aquaculture systems, growth promoters have become an essential part of prawn diets in improving FCR, reduction in mortality, enhancing digestion of prawn, etc.

Modern day, Growth Promoters not only help in improving FCR & growth but are essential in significantly reducing stress on Shrimp Digestive organs.

Over-stressing the shrimp leads to infections, toxicities and diseases, chiefly amongst them today, is the Vibrio infection. The primary symptom of Vibrio infection is the presence of White fecal matter or strands.

White Fecal matter in shrimp is due to the atrophied hepato-pancreas. White coloured strands, floating on the pond surface originate by sloughing from epithelial cells of the shrimp hepato-pancreatic tubules. In addition to white feces, infected shrimp show a loose exoskeleton, acute weakness and shriveled appearance.

FATTEN* is a potent combination of nutrient solubilizing blenders that transform complex proteins, fats & starches in easily absorbable form of amino acids, lipids and sugars, thus easing nutrition uptake. **FATTEN*** ensures complete digestion and absorption of nutrients.

FATTEN* helps the shrimp in digesting and absorbing nutrients faster & efficiently, without putting any excessive strain on the digestive organs. Maximum utilization of feed reduces wastage, increases growth rate and boosts immunity of shrimp to ward off infections

Benefits:

- **FATTEN*** opens up locked nutritional values in feed.
- Proper utilization of feed reduces wastage.
- Reduces strain on digestive organs
- Increases growth rate
- Reduces FCR
- Shortens grow out time.

Pre-emptive, regular application of **FATTEN*** is helpful in preventing Vibrio infections & white fecal symptoms. Consistent application provides the most benefit at the lowest cost while addressing all facets of health.

Feeding recommendations: 1 gm per Kg of feed for every meal from day one to day of harvest.

For best results top coat, apply before every feeding meal, shade dry and broadcast. Do not store mixed feed for long. Please consult your Nutritionist for specific dosage. The additive dosage of this product is rather small. Premix it with feedstuff, then add it to the large quantities and mix it evenly.

Can be safely used with other feed premixes like vitamins, minerals etc.

Storage: Keep away from moisture.

Presentation : 1 Kg Net
