

SWIFT-OX*

Swift Relief

Solid source of Oxygen for pond water

Oxygen is one of the critical factors for the aquatic life, especially for prawns. Under semi-intensive shrimp farming the rate of depletion of DO is quite high.

Such drops cause stress & make the culture weak, susceptible to diseases and reduce their growth rate.

Swift-Ox* brings the assurance of a new life to your farm and ponds. **Swift-Ox*** releases lifesaving oxygen & helps maintain the Dissolved oxygen levels of the pond. Reduces sludge formation and minimalises the chances of bacterial & viral diseases. **Swift-Ox*** is a boon to aqua farmers during oxygen stress period like rainy days, cloudy weather, high bacterial count in water etc.

- **Swiftly releases Oxygen to improve D.O. levels**
- **Disinfects pond water, reduces bacterial population**
- **Improves conditions at pond bottom**
- **Improves farm yield and survivability**

Broadcasting recommendations:

500 gms –1 Kg per acre of water spread area (2 feet depth). Repeat after deterioration of water parameters. Dosage can change marginally depending on pond conditions. Consult your aquaculture expert for exact dosage and directions

Presentation: Powder, 5 Kg, Bag.
