

Trap the Stink

# TOXIDUCE\*

*A Novel address to biosecurity*

*Accumulated fecal matter, especially in layers is a rich breeding ground for flies, maggots, insects and also various pathogenic bacterial species. It becomes a source for various infections to spread. Fecal matter is found to be one of the main carriers of the deadly killer virus of Avian Influenza.*

Moreover, gases like Ammonia emitted from fecal matter can irritate the respiratory systems of the birds causing various respiratory infections like CRD, Fowl Cholera, Coryza etc.

**TOXIDUCE\*** contains deodorizers with High “Cation Exchange capacity”, thereby neutralizing the gases.

### Benefits:

**TOXIDUCE\*** adsorbs ammonia and neutralizes it by “cation exchange”

Less stress on birds. **TOXIDUCE\*** creates improved poultry house conditions.

**TOXIDUCE\*** lowers ventilation costs

**TOXIDUCE\*** absorbs moisture in litter which helps control Ammonia volatilization.

Reducing moisture inhibits bacteria growth and spread of viruses

By controlling ammonia and reducing moisture, Toxiduce\* also controls flies & maggot population

**TOXIDUCE\*** offers ease of application

### Use recommendations:

Dust **TOXIDUCE\*** in small amounts over the fecal matter evenly.

Use 1 Kg of **TOXIDUCE\*** for every 10,000 birds.

Dust every day for the initial 10 days and later once every week.

**Presentation:** Powder, 5 Kgs Net Wt HDPE pouches

## TOXIDUCE\* controls

→ AMMONIA

→ DISEASE

→ HOUSEKEEPING COSTS
